CHEM 503 - INSTRUMENTAL ANALYSIS LAB - FALL 2015, 1.0 Credit Hr

| Meeting Location/Time: | Room 310 Sims Science Building Sec. 001 (Course#12412): Monday, 2:00 – 4:50 pm |
|------------------------|--|
| Instructor: | Cliff Calloway, Ph.D. (<u>callowayc@winthrop.edu</u>) 312-B Sims Science Building (x4945 or from off campus: 323-4945) Office Hours: 10:00-12:00 MTWF and by appointment |

Course Goals:

The purpose of this course is to expose students to the various types of equipment that are likely to be encountered in an industrial or government chemical analysis laboratory. While the industrial or government lab **may** be better equipped than our academic one, the basic types of instrumentation will be the same. The instruments are located in various places within Sims, but most are located in Sims 310, along with sample and standard preparation workspace, so that will be our main home.

You will work in small groups (2 or 3 students) for data collection, but further **collaboration on processing data or reporting is prohibited**. Background references for each lab are required reading, and can assist in processing data, introductory, and discussion concepts.

Each group will have an unknown sample(s) for most projects. Directions for the operation of each instrument (student manuals) are located near each device. You are expected to familiarize yourselves with this manual <u>before</u> you begin the instrumental work. Usually, the instructor will demonstrate the operating procedures prior to your measurements, but this is not a substitute for reading the instructions. Feel free to ask questions when they arise. Each group member is expected to contribute to solution prep as well as getting hands-on experience with the device.

Each instrument you encounter contains delicate components, even those instruments that appear to be outdated, so handle them with care. If you believe that a malfunction has occurred, inform the instructor before continuing. You should always consult the instructor before making any changes in instrumental parameters other than those described in the student manual and **never** perform an operation you have not been "checked-out" on by the instructor. The instruments are typically quite expensive (\$5,000 - \$200,000).

University Level Competencies:

Winthrop University's faculty adopted a set of four University Level Competencies (ULCs) to describe the qualities our students develop during their Winthrop career. It is easy to see that this course involves solving problems and developing written communication skills. However, you will also learn the responsibilities of chemists to the greater good of our planet and society, as well as the global nature of the chemistry enterprise. Within the discussions of chemical analysis, instrument design and subsequent applications to the environment, health and materials we use every day, I think you will find this course fits well with all four competencies:

Competency 1: Winthrop graduates think critically and solve problems.

Winthrop University graduates reason logically, evaluate and use evidence, and solve problems. They seek out and assess relevant information from multiple viewpoints to form well-reasoned conclusions. Winthrop graduates consider the full context and consequences of their decisions and continually reexamine their own critical thinking process, including the strengths and weaknesses of their arguments.

Competency 2: Winthrop graduates are personally and socially responsible.

Winthrop University graduates value integrity, perceive moral dimensions, and achieve excellence. They take seriously the perspectives of others, practice ethical reasoning, and reflect on experiences. Winthrop graduates have a sense of responsibility to the broader community and contribute to the greater good.

Competency 3: Winthrop graduates understand the interconnected nature of the world and the time in which they live.

Winthrop University graduates comprehend the historical, social, and global contexts of their disciplines and their lives. They also recognize how their chosen area of study is inextricably linked to other fields. Winthrop graduates collaborate with members of diverse academic, professional, and cultural communities as informed and engaged citizens.

Competency 4: Winthrop graduates communicate effectively.

Winthrop University graduates communicate in a manner appropriate to the subject, occasion, and audience. They create texts - including but not limited to written, oral, and visual presentations - that convey content effectively. Mindful of their voice and the impact of their communication, Winthrop graduates successfully express and exchange ideas.

Student Learning Outcomes:

- Gain hands-on experience with sophisticated laboratory instrumentation
 - separation, electrochemical and spectroscopic techniques
 - computer instrument control and data acquisition
 - handling techniques for solid and liquid samples/reagents
- Develop an understanding of the components of laboratory instrumentation and how different parameters can influence data output.
 - instrument modules and design
 - basic electronics for data collection and instrument control
 - signal optimization
- Perform rigorous data collection and data analysis with the aid of desktop computers.
 - spreadsheets for data domain conversion and processing
 - graphical representations of instrument response and performance
- Improve technical writing skills through written reports.
 - familiarity with instrument, analytical and scientific literature resources
 - format and writing formal reports, and verbal interactions with colleagues

Attendance and Laboratory Hours:

The laboratory will meet for the **full** scheduled time. You may **not** work in the laboratory at other times. The laboratory work, as designed, is to be completed within the laboratory period. Plan your work according to this schedule, vacating the laboratory by the end of the period. We have

limited time in this course. As such, make-up lab periods have not been scheduled. If you miss a lab, you will need **written** validation. Validate illnesses through Student Health. Non-illnesses should be validated through Student Affairs. Sports commitments are validated by Athletics.

Course Requirements and Grading:

| Text(s): | <i>Winthrop University Instrumental Analysis Lab Manual</i> and Skoog, D.A.; Holler, F.J.; Crouch, S.R. <i>Principles of Instrumental Analysis</i> , 6 th ed.; Thomson: Belmont, CA, 2007. | |
|-------------------|---|--|
| Pre-requisite(s): | CHEM 314 (Quantitative Analysis Lab) | |
| Co-requisites: | CHEM 502 (Instrumental Analysis) | |

There will be a total of **twelve** lab assignments valued at **50 pt each** and a **comprehensive lab final exam** valued at **50 pt** (distributed the last week of lab, due Monday, December 14th, 11:30 am). Each group will complete one assignment per week. An assignment generally consists of: (1) a lab **report** (30 pt); (2) a lab **notebook** (10 pt); and (3) a lab **quiz** (10 pt).

- **Report:** The lab report will consist of: Title Page, Introduction, Procedure, Sample Calculations, Results, Conclusion, Discussion, and Reference sections. (See Laboratory Report below for further details.)
- Notebook: At the beginning of each lab period, each group must submit, <u>for approval</u>, a written experimental plan. The plan should be in the group's notebook and include a <u>detailed</u> scheme for the preparation of solutions and for carrying out the task of the lab assignment. (See Laboratory Notebook below for further details.)
- **Quiz:** A written 10-15 minute quiz will be given at the beginning of the laboratory period covering the previous week's lab. (See Laboratory Quiz below for further details.)

Letter Grades: As you have probably calculated, 650 points are possible in CHEM 503. Your lowest project will be dropped. Letter grades will be assigned based on the percentage of 600 points as follows:

| 94-100%: A | 90-93%: A- | 86-89%: B+ | 82-85%: B |
|------------|------------|------------|------------|
| 78-81%: B- | 74-77%: C+ | 70-73%: C | 66-69%: C- |
| 62-65%: D+ | 58-61%: D | 55-57%: D- | |

Required Materials (for lab each week):

- Experiment handouts and course textbook (i.e. the "Skoog book")
- Laboratory notebook, one per student group is adequate...the type with duplicate pages is handy, since each student can have a copy of the raw data (black ballpoint pen preferred)
- Safety glasses or goggles
- A scientific calculator that performs least squares analysis, mean and standard deviation
- Lab coats (provided)

Important Notes:

- Again, lab reports are to be your own work, *no group effort*, and are covered by the
 Student Conduct Code: "Responsibility for good conduct rests with students as adult
 individuals." Refer to the "Academic Misconduct Policy" in the online Student Handbook:
 http://www.winthrop.edu/uploadedFiles/studentconduct/StudentHandbook.pdf
 Since all graded work (including homework to be collected, quizzes, papers, mid-term
 examinations, final examinations, research proposals, laboratory results and reports, etc)
 are used in the determination of academic progress, no collaboration on such work is
 permitted unless the instructor explicitly indicates that collaboration is allowed. This
 statement is not intended to discourage students from studying together, seeking help from
 the instructor, or working together on assignments that are not to be collected. Copies of
 old lab reports from previous years are off limits.
- **Students with Disabilities:** Winthrop University is dedicated to providing access to education. If you have a disability and require specific accommodations to complete this course, contact the Office of Disability Services (ODS) at 803-323-3290. Once you get your official notice from the office, please let me know as soon as possible.
- All laboratory work (including reports) must be completed to receive a passing grade. The absolute **deadline** for submission of written work is Final Exam Day.
- Handwritten (rather than typed) reports will not be accepted. These will be returned and late points assessed. The late report policy is strictly enforced.
- Remember that lab experiments are learning experiences. Do not get overly upset if your results do not seem to come out as planned. Try to determine the source of error and comment in your **Conclusion** section. If your results are way off from an expected value, without valid explanation, penalty point(s) will be assessed to the conclusion section.
- All group members must be present when the lab period officially begins...that's when reports and notebooks are collected and quizzes given.
- **Syllabus Change**: While unlikely, the Professor reserves the right to change the course syllabus if circumstances (weather or other events) dictate. You will be notified of any change through lab meetings and/or email.
- Additional Requirements for Graduate Level Credit: Students wishing to receive graduate level credit for this course are required to complete a 5-7 page review paper on a cutting edge analytical technique. Resources for choosing a topic can be found by reviewing either the "Fundamentals Review" or "Applications Review" issues of the journal, *Analytical Chemistry* (June 15th issue of even & odd years, respectively). The topic requires instructor approval. The paper must cite a minimum of 10 primary literature sources and must be submitted by Study Day. Graduate students should be aware that Winthrop's +/- grading system is not applicable to courses taken for graduate credit. Letter grades will be assigned as follows: 92%-100% A; 83%-91% B; 74%-82% C, 55%-73% D.

CHEM 502 Lab Rotation Schedule - Fall 2015

| NMR | Time/Frequency Domains and Digital Filtering |
|------|---|
| AAS | Limit of Detection in the Analysis of Coins by Flame Atomic Absorption Spectrometry |
| IR | Determination of Benzoyl Peroxide in Acne Solutions, Quantitative IR |
| EL1 | Basic Analog Electronics and Circuits (No quiz.) |
| DP | Data Processing – Moving Average/Savitzky-Golay/Ensemble/Fourier Analysis with Excel (No quiz.) |
| UV1 | Construction of a UV Spectrophotometer; Basic Optics |
| MLS | Linearity and Heavy Atom Fluorescence Quenching |
| COUL | Coulometric Determination of the Iodine Number for Cooking Oils |
| EL2 | Basic Digital Electronics and Instrument Control (No quiz.) |
| SA | Surface Analysis (No quiz.) |
| EC1 | Vitamin C content in Commercial Orange Juice using Voltammetry |

CE Plates and Resolution in Capillary Electrophoresis

| Date/Group | А | В | С |
|------------|---------------|---------------|----------------|
| 8/31 | Introduction | Introduction | Introduction |
| 9/7 | Labor Day | Labor Day | Labor Day |
| 9/14 | NMR | AAS | IR |
| 9/21 | AAS | IR | NMR |
| 9/28 | IR | NMR | AAS |
| 10/5 | EL1 | DP | UV1 |
| 10/12 | DP | UV1 | EL1 |
| 10/19 | Fall Break | Fall Break | Fall Break |
| 10/26 | UV1 | EL1 | DP |
| 11/2 | MLS | COUL | EL2 |
| 11/9 | COUL | EL2 | MLS |
| 11/16 | EL2 | MLS | COUL |
| 11/23 | SA | EC1 | CE |
| 11/30 | EC1 | CE | SA |
| 12/7 | CE/Final Exam | SA/Final Exam | EC1/Final Exam |
